

Dear BOWI® Customer,

On 23 October 2012 BOWI® celebrated its 25-year anniversary. This occasion is a great reason for us to thank the people who are most important to our company: you, our customers. Only through our shared dialogue, purchasing and the use of our products have we been and are we in the position of being able to exist over all of these years and to continually develop further. We are pursuing our goal in Mainz with an excellent team: the highest quality with the realisation of innovations and concepts.

That which started 25 years ago with the BOWI® RMS (Multipurpose Rescue Baton) has been further developed on a consistent basis, making us the market leaders in the area of police batons in Germany and many neighbouring countries. The quality of our products coupled with application-tactical advantages has enabled us to increase our brand profile beyond European borders which means that in recent years we have been able to count authorities and companies from countries such as China, Singapore, the United Arab Emirates, Ecuador and many other places as our customers.

Even though our core area of expertise is in the area of batons, BOWI® offers an increasingly wide range of products and services. In addition to the latest handcuffs we also develop body protection systems that are in successful use in police and military units across Europe. The development of our self-inflating ballistic protective blanket is setting new standards in the field of ballistics. We are especially proud of having equipped the German Military [Bundeswehr] with an ultramodern camera system which is to be used abroad as a visual aid for vehicle inspections from 2013 onwards.

In addition to our products, the BOWI® training programme has also been continuously updated and adapted to the requirements of a modern police force. Our successful 3-stage BOWI® EKA (extendable baton) training concept is now not only used in almost every region in Germany, it is also used by police units both in and beyond Europe.

More information and offers are available on our homepage www.bowwi.de & www.bowwi-shop.de. We are pleased to continue our successful cooperation with you into the future.

With warmest regards from Mainz,

Wolfgang Bopp

SMARTLOCK BATON

A PREMIUM PRODUCT FROM BONOWI®

PATENTED INNOVATION

For the locking system of the SMARTLOCK baton, we have received both an American as well as a European patent.

TECHNICAL GUIDELINE OF THE PTI – POLIZEITECHNISCHES INSTITUT HILTRUP

The SMARTLOCK baton 21“ completely fulfils the requirements of the “technical guideline of the german police baton; short and long” 04/2006. The same values were proven for the 16“ and 26“ SMARTLOCK baton by special tests carried out at the MPA Hanover. The cylindrical form of the extendable endpiece, used worldwide for the first time by BONOWI, has now successfully established itself on the market and with professional users.

EFFICIENT AND MULTIFUNCTIONAL IN USE

The extremely effective use of the instrument has proven itself over and over again in practice. In the first level of use, when the police officer impressively pulls out the SMARTLOCK baton and addresses his opponent, this is usually all that is needed to discourage an attack, thereby mildly attaining the goal of the police. In the few cases in which this is not sufficient, one strike to the muscles around the arms or legs usually results in cessation of attacks against police officers.

PRACTICAL APPLICATION

The baton can be opened easily by swinging it at the wrist or by pulling its tip. It is closed by pushing together the rods after pressing in the release button on the rear gripping end. The impact energy is absorbed by the rubberized grab handle and slide rings at the crossover points of the single sections. The slide rings additionally allow the baton to be opened and closed silently (no metal grinding noises, no rattling) without bounce-back.

NEW EKA ULTRALIGHT FROM HARDENED ALUMINIUM NOW AVAILABLE

EKA HOLSTER CORDURA®

A completely new belt holster has been designed for the EKA. A reinforced, 180° rotatable belt holster made of Cordura® in black. Allows the draw angle to be set steplessly and can be worn on right or left. The holster can be worn upright, vertically and diagonally on the body. This special holster supplements and increases the possible uses of the EKA enormously.

EKA Holster GK, 180° rotatable

Art. No. 0411801-HR180

EKA DEFENSE ADAPTER

The Defense Adapter can be fixed easily to the baton without tools and expands its range of uses considerably - especially during defensive manoeuvres. The Defense Adapter changes the baton into a multifunctional tool.

EKA Defense Adapter

Art. No. 0411801-AD

EKA GRIP SAFETY RING, 2 MODELS

The grip safety ring is removable and prevents slippage when quickly expanding the baton. It can be pushed over the grip and can therefore be fixed to the baton without using tools or other aids. The grip safety ring is self-locking and available in two models (round and square).

EKA Grip Safety Ring, round
EKA Grip Safety Ring, square

Art. No. 0411801-R
Art. No. 0411801-Re

EKA TACTICAL ADDITIONAL MIRROR

Tactical additional mirrors are available in two sizes for our batons. You can use the mirror to see round corners without being detected or to inspect rooms before entering them. A clip retainer is fixed to the mirror to allow you to easily clip it onto the EKA.

EKA Additional Mirror Ø71 mm
EKA Additional Mirror Ø92 mm

Art. No. 0411801-MR1
Art. No. 0411801-MR

EKA ALUMINIUM END CAP, IMPACT RING WITH FIXING HEAD

1. The aluminium head is an extension of the EKA for screwing on and can be used to smash windows. It also makes it easier to extract the EKA when wearing gloves.

EKA aluminium head short 10 mm, black
EKA aluminium head long 20 mm, black

Art. No. 0411801-EA
Art. No. 0411801-EA-long

2. The impact ring is always there when it is required, due to its fixing on the base of the H1 holster. Fast and simple - like the entire system - it can be mounted onto the EKA without tools with a few hand movements and ensures, e.g. fast and safe window-breaking, even of vehicles.

EKA Impact Ring

Art. No. 0411801-ER

EKA HOLSTER H1 AND K1

The H1/K1 holster system is modular. Both open holster frames as well as closed receptacles are available for the EKA 16“, 21“ and 26“. The pivot lock mechanism is always of the spring-loaded snap type and can be set in 30° steps up to a maximum of 180°, allowing it to be worn both on the left and right.

SMARTLOCK HANDCUFFS

BONOWI® SMARTLOCK HANDCUFFS

The BONOWI® SMARTLOCK allows safe arrest of persons and safe transport of suspects. The chief characteristics of these handcuffs are their optimal durability, triple securing, thumb locks, large interior diameter, and the ability to open and close from both sides - all combined in a modern, functional design. Complies with the technical guideline of the german police handcuffs, lockable - as of 10/2004. The handcuffs are available in a hinged and a chain version.

Universal combination key: The SMARTLOCK universal combination key – Your advantage is twofold usability! One side enables the SMARTLOCK handcuffs to be opened, the other side can be adapted to match customer-specific requirements depending on the current deployment.

SPECIFICATION

- Suitable for all wrist sizes
- With triple locking mechanism
- Safety mechanism to prevent unintentional narrowing of locking clip (thumb lock)
- The locks can be opened and closed on both sides
- Complete stainless steel housing

SMARTLOCK handcuffs, chain version	Art. No. 0610202K
SMARTLOCK handcuffs, hinged version	Art. No. 0610202
SMARTLOCK combination key	Art. No. 0610202KSL

SMARTLOCK-FLEX

A further development of the disposable handcuffs is the reusable SMARTLOCK FLEX which is opened with the SMARTLOCK key and that offers a range of advantages:

- triple locking mechanism like the SMARTLOCK handcuffs
- can be opened with the key on each side
- highly tear-resistant and abrasion-resistant lopped fabric
- plastic and metal lock for extreme durability
- the textile band can be disinfected or replaced when worn out
- single or double loop
- space-saving

SMARTLOCK-FLEX	Art. No. 0610201
Cuff block for SMARTLOCK-FLEX	Art. No. 0610201-S
Textile tape for SMARTLOCK-FLEX	Art. No. 0610201-Tb

SMARTLOCK HOLSTER

KYDEX RECEPTACLE FOR SMARTLOCK HINGED VERSION

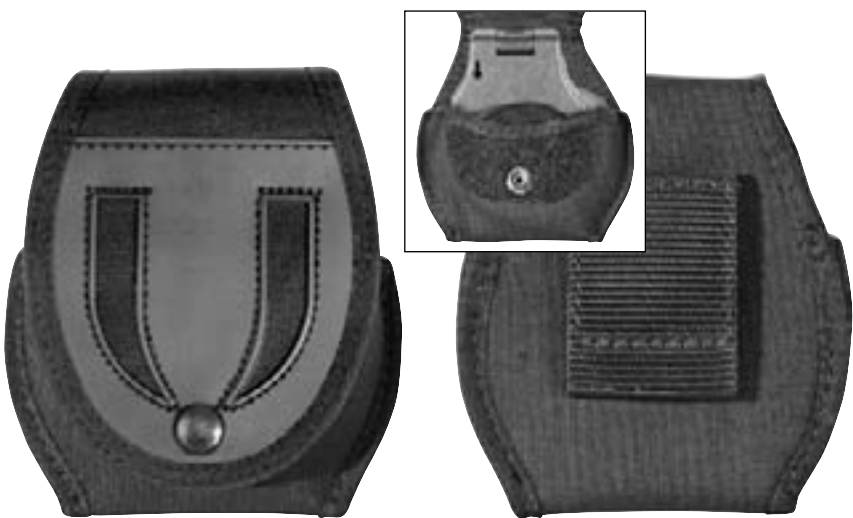

These Kydex receptacles are only available for our SMARTLOCK hinged version.

- Handcuffs worn with the lock downwards.
- Configurable retraction resistance through threaded rubber blocks.
- Suitable for all belt widths.

Kydex receptacle

Art. No. 0610910KT

SMARTLOCK HOLSTER

HANDCUFF POUCH MADE FROM CORDURA®

This handcuff pouch is available in two types for our SMARTLOCK chain and hinged version.

- The two handcuff types are worn with the lock upwards
- Polycarbonate reinforced lid
- Including key holder
- Suitable for all belt widths

For chain version Art. No. 0610911
For hinged version Art. No. 0610912

**UNIVERSAL-HANDCUFF POUCH
MADE FROM CORDURA®**

This universal handcuff pouch is suitable for both SMARTLOCK versions.

- The two handcuff types are worn with the lock downwards
- Polycarbonate reinforced lid
- Including key holder
- Suitable for all belt widths

Universal handcuff pouch
Art. No. 0610910

HANDCUFF POUCH MADE FROM LEATHER

This handcuff pouch is available in two types for our SMARTLOCK chain and hinged version.

- The two handcuff types are worn with the lock upwards
- Including key holder
- Suitable for all belt widths

For chain version Art. No. 0610910L
For hinged version Art. No. 0610910LS

TRANSPORT BELT • RESCUE BELT

Art. No. 0612056

TRANSPORT BELT

The TRANSPORT BELT secures and fixes extreme offenders with a body belt to which the BONOWI® handcuffs with thumb lock and double-lock are attached. The hand-cuffs can be released by securing straps in order to, e.g. carry out identification/fingerprinting. In case of resistance, the handcuff can immediately be again tightened and fixed to the body. Additional foot straps can be added mission-dependent, and are included in the delivery.

Optional: Leg connection and locking retainer

Art. No. 0612057

RESCUE BELT

The Rescue Belt is used when just cuffing the hands is insufficient and when a mentally disordered person or persons still continue to put up strong resistance after being arrested. The BONOWI® Rescue Belt can also be used successfully in cases of resistance in correction facilities, because it supports detention using joint-lock techniques and a person is secured over the arm and can also be securely carried after applying the Rescue Belt.

DEPORTATION BELT

DEPORTATION BELT

The BONOWI® Deportation Belt was developed on the principle of the Cuff Belt. The Deportation Belt secures and restrains people during deportation and criminals during medical examinations. The Velcro® cuffs can be released in a controlled manner with securing straps in order to give the person some freedom of movement. Depending on use, an additional foot retainer with variable settings can be supplemented and is part of the scope of delivery. The Deportation Belt was developed to provide humane restraint during deportations, and therefore complies with the required individual security measures. To ensure interventions are possible in the event of external and auto-aggressive actions, the restrained person must not be left unsupervised at any time.

STOP STICK® LTD. • STOP-STICK®-SYSTEMS

STOP-STICK®-SYSTEMS

Stopping fleeing vehicles is often associated with significant risks, for the police officers involved, unrelated third parties and the persons attempting to escape. It is not uncommon for such attempts to escape to end in significant property damage and injuries.

The **STOP-STICK®** can be deployed quickly and safely, i.e. just 8 seconds are needed from stopping the patrol car to deploying the roadblock. The available deployment reports impressively confirm a 100% safe and effective functionality of the system. In 2010, the system's functionality was verified on **RUN-FLAT TYRES**. This means that **STOP-STICK®** remains the number 1 deployed road block in Germany.

PROPERTIES AND POSSIBLE USES

- lightweight for easy handling
- as stop signal on patrol car (thrown in front of getaway car)
- omnidirectional for reliable use
- with cord reel in nylon casing
- watertight, stable plastic build
- red-white (clearly visible/signaling) or black
- can be easily mounted in trunk using little space (discrete/concealed)
- can be used individually or in groups

STOP STICK® DEPLOYMENT SET

Three STOP STICKs® and a replacement stick, each approx. 100 cm. Aluminium mounting device for simple assembly in the trunk or with carrier bag, cord reel, 24 m braided nylon cord, 54 kg tractive force. Tearproof nylon casing – 3 m long, double top-stitched nylon construction.

STOP STICK® TRAINING SYSTEM

Learn to stop faster – the training kit contains: Cord reel, 3 m nylon casing, as well as three “disarmed” training sticks, identical to the original in both shape and weight.

BARRACUDA STOP STICK®

Stop vehicles that are moving - as road block. The base is made of highly tensile ABS plastic and can be equipped once again with removable elements after being used. Includes 4 additional removable elements, length: 100 cm

TERMINATOR STOP STICK®

For securing vehicles – can also be thrown directly in front of a (moving) vehicle, depending on the situation. The overroll caps on both sides ensure that the terminator stops on the right side. Length: 60 cm

When reconnoitering a situation is key to your missions success, the Zistos® mobile tactical surveillance kit is your first choice as a professional user.

The easy to carry camera system is powered by a mobile power source. Maritime versions are available with waterproof components. The system lets you see into hidden areas, and can be extended via telescopic pole for up to 7 meters. The base unit consist of a monitor, a control unit, a flexible camera pole, the camera head itself, battery pack, and carry system.

Great news is the combination with the Notebook Rocky RK9 der by Roda® Mildef, which is in use with the German army. Produced along Milspec standards, the Notebook receives Zistos® signals wirelessly, and can record them. This combination has been tested and won over all international competition.

The whole system is based on a modular system that allows the user to adapt to the situation at hand:

- in traffic stops or vehicle searches
- border control
- entering of buildings, room entry
- hostage situations etc.

The versatility is even greater, when combined with the „Recon Scout robot“. The robot can thrown in the critical area, and then radio controlled. The camera view is then wirelessly transmitted back to the base unit.

The Zistos® infrared and thermal camera heads produce good view, even in lowlight and with heavy smoke.

ZISTOS® COMPONENTS:

- mobile LCD unit
- walkabout system
- Under Vehicle Inspection Trolley
- Wide Angle Color Cameras with 3.6mm or 6mm color camera, both with light
- Telescopic poles in different sizes
- Extensions
- thermal camera
- portable receiver
- waterproof camera heads
- remote controls Recon Scout Robot
- combinations and transmission with „Ruggedized Notebook“
- V-Case, robust and waterproof carry case
- Chest harness made of nylon

The system can be modified and extended because of its modular build.

PREVENTO® FIRE EX 600

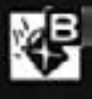

In many cases, the world innovation that is the FireEx extinguishes fires more effectively than water, foam or powder. The FireEx can also be used to tackle all incipient fires in the house, car or garden without limitation. This extinguishing gel can even be used for the safe and effective treatment of human burns. It was developed directly by the developer of the specialist gels for personal protection. It is also suitable for extinguishing burning barriers, tyres, plastics, liquids, waste etc. Below is a summary of its key advantages:

- no re-inflammation subsequent to extinguishing
- up to 20 times better cooling
- non-toxic – non-hazardous material
- fire class A, B, C, & F
- straightforward cleaning after use with water
- prevents the occurrence of fire gases
- application reach of up to 5 metres
- frost protection of up to -10°C
- PH neutral pH 7 +/- 1.0
- 3 year functioning warranty (durability)
- good bonding and optimum use of the cooling effect on hot and smooth fire surfaces
- impregnates burning and flammable materials pursuant to DIN 4102 (high flammable B1)
- Made in Germany

Art. No. 15110010

The extinguishing effect of FireEx 600 on the different materials of the fire classes:

-  Fires on solid materials, mainly of an organic nature, which normally burn with glowing embers.
-  Fires on liquid substances or materials that become liquids.
-  Gaseous fires.
-  Cooking oil or fat fires (vegetable or animal fats and oils) in fryers and deep fat fryers as well as other kitchen systems and devices

WORLD NOVELTY

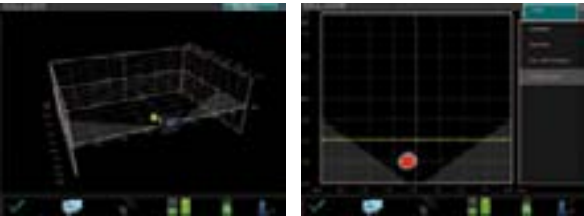

WALL RADAR • SILENT DRILL

WALL RADAR – NEW DEVELOPMENT FOR SPECIAL UNITS

This device works through a solid wall and enables you to localise the number and location of people behind the wall. This is a huge advantage when evaluating locations and preparing entry into rooms. Specifications:

- enhanced computer processing / transmitting possible
- robust platform
- internal and external power supply possible
- Accessories: Tripod stand, strong, shock-resistant case, harness for carrying the case as a rucksack function

Art. No. 1530100

MIDI 7 SILENT DRILL

The ULTRAFINE ‘MIDI 7’ silent drill has been designed by experienced installers to replace the C7 low noise drilling system and offers users a vastly enhanced device, with greater control, mounting options, and a family of supporting products to enhance the Midi 7’s capability.

The ‘MIDI 7’ is a two motor system allowing users separate control for the drill feed, and also the RPM and torque of the drill gear head.

The unique mounting system gives users a variety of options for fixing the drill to the drilling surface, utilizes standard tripod mounting threaded holes for weight support, greater flexibility for fixing the drill head at various angles as required, along with a quick release feature gives users quick access to the drill face. It also incorporates a drill guide for the initial stages of a drilling operation giving support to the drill tip near to the drill face.

The hand held controller (HHC) offers a smooth variable gear head RPM speed control, variable feed speed control with built in safety feature, along with many other unique features to ensure accuracy and ease of operation.

A range of supporting products are available including core drill sets of varying diameters, solid drill sets of varying diameters, water pump systems, vacuum extraction systems, pin holing kits, water reservoirs, and microphone mounts of varying diameters.

The system is lightweight, and can be powered by batteries or mains power supply, operating voltages between 10.8V and 24V.

Low current consumption allows for a long mission life with compact battery packs.

The ‘MIDI 7’ is a low maintenance system requiring no lubrication by the user, and being waterproof to a splash proof level and rust resistant will only need cleaning after an operation at the users discretion.

Art. No. 1530200

SEARCH AND FIND DEVICES

Art. No. 1510426

EB 607 HAND SENSOR

The EB 607 hand sensor has proven its usefulness thousands of times all over the world. Due to its particularly robust metal design, it continues to provide unparalleled reliability in large scale operations and continuous operations - even today! Search device comprised of a ring probe and tube with acoustic metal display, weight approx. 450 g.

- easy handling
- easy operation
- robust design
- automatic balancing
- loud signal
- optical and acoustic control functions

EB 610 C Art. No. 1510429
EB 610 D Art. No. 1510428

EB 610 C/D SHAMROCK HAND SENSOR

EB 610 C hand sensor in robust lightweight design with optical and acoustic display dynamics for easier detection of metallic parts in the area of disturbances (e.g. iron reinforcements in the ground). The new EB 610 D hand sensor has a whole range of new additional functions. This provides real benefits to the user. The „D“ index in the type ID stands for „Digital“; weight approx. 275 g.

- | | |
|--------------------------------|-------------------------------|
| • ergonomic design | • microcontroller |
| • easy handling | • digital functions |
| • automatic balancing | • self-test, acoustic/optical |
| • optical and acoustic display | • dynamic/static search mode |

Art. No. 1510427

EBEX 612 HAND SENSOR

The EBEX 612 is a non-slip, closed unit. It is comprised of the ring probe and the tube with a soft plasticcoating. Pushbutton switches and charge sockets are contained countersunk in the tube. After switching on, it is automatically balanced to a uniform, fixed response sensitivity, weight approx. 500 g.

- robust and reliable
- closed design
- optical and acoustic control functions
- dynamic/static mode
- sophisticated acoustic display
- charge system for large scale and continuous operation

Art. No. 1510485

HAND METAL DETECTOR

The handy metal detector for safety checks - especially useful for mobile units. Length 22 cm, tapered circumference 3.8 cm to 2.9 cm; weight approx. 200 g.

- precise detection of all metal objects
- thin design with 360° all-round detection
- pinpointing (exact location) in the tip of the device
- alarm signal by optical display and noiseless vibration
- 9 V battery included, approx. 70 hours operating time
- does not need to be set manually
- robust plastic construction for high shock resistance
- integrated flashlight for use at night and/or inspecting luggage
- no tools required for changing battery

SEARCH AND FIND DEVICES

METAL-TEC 1400 METAL DETECTOR

Search device with three-axe detection field detects all ferrous and non-ferrous metals in the immediate vicinity of the detection field. At a distance of just a few centimetres, the Metal-Tec 1400 already alerts the police officer silently and reliably to the presence of weapons, razor blades and drugs wrapped in metal foils, thereby providing him/her with a tactical advantage; weight approx. 249 g.

- watertight, shock-resistant ABS plastic housing
- easy to operate, no adjustment required, ON/OFF pushbutton
- detects all metals
- silent vibration
- approx. 2000 searches can be made with just one 9 V alkaline battery

SAFE C HAND MIRROR

Safe C is an illuminated inspection mirror - an important aid during security checks of, e.g. vehicles, boats and airplanes. The telescopic tube can be extended continuously from 20 to 80 cm. The battery compartment with 2 AAA micro-cell batteries is contained in the grip of the telescopic tube. To ensure that it can be used in the dark, the light can be switched on and off by rotating the grip handle;

- weight approx. 320 g.
- extremely compact
 - can be folded up
 - can be used day and night
 - a multitude of uses

EFIS 1 UNIVERSAL INSPECTION MIRROR

The EFIS 1 inspection mirror is used for fast inspection of locations normally difficult to inspect or to view such as the undersides of vehicles, baggage racks, cavities and compartments as well as secluded parts of buildings. The light and extremely robust design of the portable EFIS 1 as well as its infinite adjustability enable it to be used under an extremely diverse set of conditions. The mirror lighting ensures detailed inspection in bad light conditions; weight with lamp approx. 1.3 kg.

- light, robust, weatherproof, illuminated
- various mirror sizes, rollable from ø 300 mm
- stabilizer for large mirror diameters
- telescopic support tube can be extended continuously
- mirror head, can be swivelled approx. 135°

EFIS 4 UNDERFLOOR INSPECTION MIRROR

The mobile EFIS 4 underfloor mirror is a practical tool for fast inspection of vehicles. The large, hinged mirror is available as a special model in polished steel - this model has proven to be particularly robust for continuous operation. 10 waterproof LEDs provide sufficient lighting. It is designed ergonomically and the telescopic tube can be adjusted to the size of the operator, making it easier to inspect the underside of large vehicles; weight approx. 4 kg.

- handy, robust, weatherproof, lit by 10 special LEDs
- mirror angle can be mechanically adjusted by cable pull
- mobile
- can be disassembled for transport

Viper glove Art. No. 0210600

VIPER SAFETY AND SEARCH GLOVES

The BONOWI VIPER safety and search glove has been cut to size and processed anatomically. It is manufactured with a pre-shaped side liner (lateral joint/leather strip from the tip of the index finger down to the wrist), finger sidewalls and an elastic band around the wrist area. This ensures an excellent fit and a comfortable feeling. The glove is made of a very high quality, breathable goatskin which is both water-resistant and washable. The cut-protective Dyneema® lining is sewn onto the outer skin of the glove. The cut protection covers the fingers, the space between the fingers, as well as the back and palm of the hands. According to the current state of technology, the composition of the VIPER safety and search glove provides the best possible compromise between good sense of touch and all-round cut protection. It is extremely flexible and allows for reliable and perfect searches of rooms and persons. The inside lining provides all-round protection from the gauntlet of the glove right down to the area of the wrist.

TECHNICAL DATA

Material: the outer skin is made of 100% goatskin, has been made water-repellent and silicone primed, breathable, water-resistant, very flexible, washable. Color: black. Thickness of leather: 0,8 - 1,1 mm, AZO-free, Chrome IV and protein content: below the detection limit. The inner material is a cut-protective Dyneema® inside lining sewn onto the outer skin. Approvals: certified compliant to DIN EN 388:2003 and DIN EN 420:2003. Sizes: XXXS, XXS, XS, S, M, L, XL, XXL and XXXL.

QUANTUM 100 GLOVE

QUANTUM 100 GLOVE

Universal, certified police glove for daily patrol duties. Flame resistant (class 1 according to EN 388, EN 407, EN 702), cut-resistant (class 5 according to EN 388:2003). Lightweight impact protection in knuckle area and on the finger joints.

PROTECTION

The BONOWI Quantum 100 offers an excellent price/performance ratio and is an absolute all-round glove for daily patrol and law enforcement duties. This combination of high-tech materials results in a highly-flexible and nevertheless extremely safe glove.

The protective characteristics have been verified in an official test report dated 17.12.2009 issued by the Hohenstein Institute (test: 15./16.12.09, Test Report No. 03-15/187-2009).

FLEXIBILITY

The flexibility/freedom of movement of the user is never limited or impeded due to the use of state-of-the-art fabrics. In addition, the glove offers excellent firearm handling as well as good tactile sensitivity for examinations.

RANGE OF USE

The impact-protection padding on the back of the hand of the glove allow it to be used in the “anti-riot field” (defense against impact). Because the cut-protection membrane of the glove is very thin, it is also especially suited as a search glove and a multifunctional glove.

TECHNOLOGY

The key components of the glove are its inside cut-protection membrane made of Dyneema®, the foam impact-protection padding on the back of the hand and the knuckle, the outer skin made of various aramide fibres, the inside hand surfaces made of polyamide and polyurethane (synthetic suede), and the neoprene wrist belt lock.

TECHNICAL DATA

Material: Dyneema®, aramide fibres, synthetic suede, neoprene
Sizes: XS, S, M, L, XL and XXL

Quantum 100 glove Art. No. 0210428

QUANTUM 200 GLOVE

QUANTUM 200

Leather service gloves - with protection - made from black, structured, specially processed leather, thickness 0.7–0.8 mm, soft and flexible, water repellent, petrol, oil and diesel resistant, flame-resistant, 100% colour-fast, perspiration and abrasion-proof; reactive dyed.

The glove is filled with a special lining made of aramide / steel / silver fibres, which provides excellent cut resistance properties. This lining has climate-compensating, antibacterial, antistatic and odour inhibiting properties. In combination with the above detailed waterresistant leather, it is optimally suited to achieving cut protection class 5 in accordance with EN 388.

The flexible and soft impact protection which has been worked into the glove provides excellent energy absorbing properties thanks to its special design and composition.

Art. No. 0210423

Version 2 of the Quantum 200 is identical to the first version, but comes with NOMEX® material worked into the upper section of the glove.

The protectors are certified according to Öko-Tex 100, a datasheet according to EN1621-1 is available. A human ecological evaluation by an accredited test institute is available for the leather. The gloves are certified according to EN420 and 388 as well as EN407 (burning behaviour). The gloves can be washed at 40°C. Sizes: 7, 8, 9, 10, 11 and 12.

Art. No. 0210424

The products on these pages are also available for private consumers!

PINPRICK RESISTANT TACTICAL GLOVE

A sufficient sense of touch allows reliable and perfect searching of persons and also withstands the pressure of a thin injection needle to a scale of at least 500 g.

TECHNICAL DATA

Material: South-American Peccary leather, equipped with 3M Scotchguard for liquid-resistance; padded with an additional, stab-resistant layer with specially prepared vegetable products, chrome-free doeskin; intermediate layer with complete coverage of the fingertips by SUPERFABRIC® material; lined with X-Static® liner towards the skin with antistatic, antibacterial, odor-inhibiting and temperature-regulating properties; color: black. Sizes: S, M, L, XL and XXL

Peccary Glove Art. No. 02110700

TACTICAL GLOVE WITH QUARTZ SAND FILLING

Tactical glove with quartz sand filling in the back of hand and up to the knuckles. The glove therefore provides ideal protection for the entire hand, including the fingers. Outer glove made of soft, non-slip, water-resistant kangaroo leather (high tensile strength and watertight). Inner glove made of Spectra, cut-resistant.

TECHNICAL DATA

Material: Outer skin made of kangaroo leather, inside liner made of Spectra, cut-resistant; color: black; sizes: 7 to 11.5.

Tactical glove Quartz sand filling Art. No. 0210521

STREET LINER II TACTICAL GLOVE WITH ARMOR-TEX®

The Armor-Tex® insert provides excellent cut protection for the inside surface of the hand while simultaneously providing good tactile properties in the finger areas for safe and secure checks when searching persons and objects; can even be used when shooting. The resilience of the Armor-Tex® fibre can resist blades for a long time - even saw-toothed blades have difficulties to overcome the cut resistance of the material. The area at the back of the hand is equipped with elastic inserts made of Spandex nylon, therefore ensuring a perfect anatomic fit.

TECHNICAL DATA

Material: Neoprene/Armor-Tex®; color: black; size: XS, S, M, L, XL and XXL.

Tactical glove Street Liner II with Armor-Tex®
Art. No. 0210407-II

TACTICAL GLOVE STREET LINER II FULL-CUT

This tactical glove provides a high level of cut protection in case of direct contact with knives, glass splitter or other sharp objects - thanks to its inner lining made of Armor-Tex® material; certified up to international protection class 5. The Street Liner II Full Cut tactical glove can be used when shooting and carrying out other official duties. The upper of the inside hand surface is a non-slip gripping material which ensures secure access and optimum control of the weapon. The area at the back of the hand is equipped with elastic inserts made of Spandex nylon, therefore ensuring a perfect anatomic fit. There is an absorbent material on the outside of the thumb area that can be used to wipe off liquid from scopes, glasses or other glass objects.

TECHNICAL DATA

Material: Neoprene/Armor-Tex®; color: black; size: XS, S, M, L, XL and XXL.

Tactical glove Street Liner II Full Cut

SERVICE BAGS

MAXPEDITION – INCLUDING BALLISTICS PACKAGE

BONOWI® now also sells MAXPEDITION rucksacks!

We make your rucksack ready for operations! We install a ballistic plug-in in the back compartment in accordance with German protection class I+ with Velcro® / fleece. This means you can use your rucksack as a shield in an emergency situation with gunfire. The shielded area is only worthwhile with a minimum level of coverage and is only possible on certain models. Please do not hesitate to contact our sales team for advice if you are interested. You can also choose between the rucksacks on our homepage.

BODY PROTECTION EQUIPMENT

Good body protection starts today with the concept and definition of suitable functional underwear. In addition to ensuring good levels of wear comfort, it can also significantly increase the protective effect in terms of flame resistance and shock absorbance. Our own functional underwear systems developed in-house can also be supplied with highly-flexible impact protection inserts made from d3o material for the exposed sections. This soft and highly-flexible material stiffens in the event of contact energy (e.g. impact) and achieves excellent shock absorbance values.

The heart of the body protection system is the base vest, which we manufacture individually and tailor made, even for small batches. The choice of shot inserts depends on the desired protection class. Our range covers impact protection levels of 15 Nm, 35 Nm up to 100 Nm impact and stab protection including the requirements of the current VPAM and includes a wide selection of protective inserts, as well as combinable ballistic solutions.

We also offer numerous solutions for arm, leg and abdomen protection, all of which fulfill the latest technical directives.

The following products are intended merely to give you an overview of the possible components. Body protection is an area where we refuse to compromise. **Safety, quality and reliability** are our primary concerns.

For this reason, we would be delighted to arrange an appointment for a personal demonstration of our options.

Your **BONOWI** Team

BODY PROTECTION

COMBI – PROTECTIVE VEST IMPACT PROTECTION / STAB PROTECTION / BALLISTICS

The BONOWI® Combi – Protective Vest MP–A 003 consists of a front and back section including shoulder protection. The front has been equipped with a Molle band to enable every wearer the individual attachment of the differing attachment pockets. A helmet attachment as well as a 15x4 cm fleeced section for identification purposes are also included. The knife catching function is integrated in the front section. The arm protectors can be attached to the extended shoulder protection using a press stud or Velcro / fleece. A fleece area for attaching identification is also provided. The double Velcro in the shoulder and the side area means the jacket can be exactly adjusted to suit every size. Once the vest has been adjusted to suit the right body size it can then be put on, with one side of the vest being completely opened by undoing the double Velcro. The shoulder section features flaps to enable wires for a listening or speaking device. The openings of the insert pockets for raising the protection class to SK IV are situated below the knife catcher on the front and under the shoulder flap on the back of the protective vest.

Insert and attachment pockets

In the inside neck area the vest is fitted with fleece in order to enable the subsequent fitting of a ballistic or impact protection collar. The 100 Nm impact and stab protection inserts are fitted as external inserts, and the ballistic package SK I+ as an internal insert. The ballistic inserts can also be worn separately using the straps supplied. A radio pocket and a multifunction pocket are also supplied with each vest, which can be positioned freely on the vest with the Molle system.

Art. No. 0210887

BODY PROTECTION

CHAMELEON BODY PROTECTION SYSTEM

Innovative – effective – varied – cost-effective.

Protective under-vest – protective bomber jacket style vest and body protection system with impact and stab protection. Equipped with a system for all layers. The basis of this highly versatile system consists of an SK I protective under-vest. This can be worn separately or fitted to a bomber jacket that opens at the front. For closed operations the protective vest can also be equipped with impact and stab protection inserts of differing protection classes. The bomber jacket also has fixtures below the shoulder straps for the adaption of shoulder and arm protectors. Impact and stab protection inserts:

BASIC BODY PROTECTION

In this brochure, we limit ourselves to our basic body armor, which can be produced as protective jackets against impact and stabs. All impact and stab protective jackets can be supplied with openings to the front or side. The side-opening version can be optionally fitted with an integrated ballistic package. We manufacture the fixtures, in accordance with customer specifications, which can be permanently sewn on or fastened with a loop system.

We will be happy to produce new developments especially for you.

The suppliable materials and protective classes can be taken from the table on page 55.

Vest Art. No. 0210870

Optional accessories – please refer to table page 49

BASIC MILITARY JACKET

A modular design protective jacket with combination package impact/stab protection and SK I, insert pockets in the front and rear sections to increase protection class to SK IV 10"x12". The jacket can be equipped with an attachable ballistic collar SK I. The shoulder area can also be retrofitted with ballistic inserts of protection class I. The shoulder and side areas are configured individually to the body with Velcro straps.

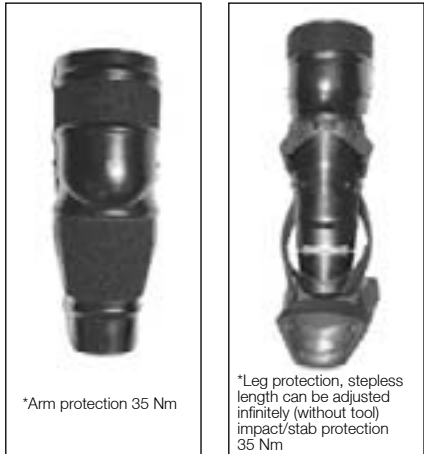

Cordura-reinforced attachment pockets, weapon abdomen pocket.

The suppliable materials and protective classes can be taken from the table on page 55.

*Optional accessories – please refer to table page 49

SERVICE SUIT MODEL SEE

2-section suit made from kermel/viscose, the weatherproof jacket is equipped with a laminated breathable membrane. The kermel laminated membrane prevents the penetration of burning liquids. The expanding darts in the back mean that the jacket always fits optimally, no matter whether it is worn with a body protection vest underneath or without. The arms and legs are equipped with long zippers, in order to enable the attachment / removal of protectors.

BODY PROTECTION VEST JUSTICE

Protective vest with segmented impact / stab protection inserts according to the technical guideline of the German police light body protection guidelines. The protector is raised at the sides by 3 cm in this model, in order to increase the protected area. The collar is equipped with a cut resistant insert.

The suppliable materials and protective classes can be taken from the table on Page 49.

Body protection vest Justice Art. No. 0210886

ABDOMEN PROTECTION

The two-part BONOWI® abdomen protection 35 Nm impact and stab protection consists of a groin box and lower abdomen protector. The protectors are integrated in a textile casing so that they are able to move underneath each other. This enables the highest possible flexibility to be attained with the maximum protection.

BALLISTIC PROTECTION EQUIPMENT

Shot retardant systems such as protective vests, shields, blankets and other items require extensive technical expertise and precise manufacturing. The **BONOWI® Group** has expanded with **BONOWI® Ballistic and Special Products GmbH**, abbreviated to **BONOWI® BSP**, - in order to comprehensively meet these exacting demands.

Innovations, development and patents enable us to supply our customers with the latest high-performance products at all times. Our internal manufacturing and production department stands for quality "Made in Germany" and is certified for quality assurance in accordance with DIN ISO 9001:2000, guaranteeing our customers consistently high quality products.

All shown Products are just examples. We manufacture exactly to your needs, to get you the product that your really want for the job.

Special solutions are available for special teams, that we plan and produce individually with you. To complement our ballistic products, we offer a wide range of medical products for emergency medicine and TCCC.

We offer education and training by our internationally experienced team.

In addition to our shot retardant products, we also offer a comprehensive range of medical products for emergency situations. These serve to supplement the equipment.

We also offer a professional training and instruction program for all of our products given by our trainer team, all of whom have international experience in their fields of expertise.

BALLISTIC PROTECTION EQUIPMENT

BALLISTIC PROTECTION EQUIPMENT

MODULE SYSTEM SK1 PLUS BALLISTIC PROTECTIVE JACKET

This model has been certified in Mellrichstadt, Germany based on the most recent German TR (technical guideline for protective jackets, as of March 2008 - Revision October 2008).

The largest possible protective area and highest level of wearing comfort with the lowest area weight were the priorities in designing this vest. The material combination in the outer liner of the protective vest is polyamide with ripstop (sturdy) and perforated polyamide MESH (breathable) to meet the demands of unsettled, demanding climatic conditions. The tried-and-tested MGT System worked into the shoulder area is comprised of a "multiaxial rubber fabric" that absorbs forces over three axes. This special feature significantly increases the wearing comfort and prevents the protective under-clothing from swinging upwards - something that happens when using normal 2-axis webbing.

The ballistic packages are comprised of tried-and-tested para-aramide from DuPont® and Twaron® known for their long-term durability. This layered ballistic structure is protected by EU patents. The surface weight of the ballistic structure, determined by the Ballistics Laboratory at Mellrichstadt, is 49.7 g/dm² with ballistic shell.

PROPERTIES

- Protective class SK1+ reference firing shots
- *Reference firing shots*
- 1. 9 mm Makarov, VMR, iron core, (complies to VPAM)
- 2. .357 Magnum, KS, GECO 10.2 g (V50 = approx. 402 m/s)
- 3. 7.62 mm Tokarev, VMR/WK/ steel vest, Russ. (complies to VPAM)
- 4. Threshold V50 acc. to STANAG No. 2920, 1,102 g (V50 = 594.7 m/s)
- 5. V50 value acc. to VPAM for DM41SR (V50 = 498.2 m/s)
- Shock absorber, 3 mm thick, spinal and cardial (trauma smaller than 18 mm)
- Optional: Pullover type vest, function shirt, protective vest carrying bag
- Ladies vest – size M (area 23.0 dm2) corresponds to approx. 1,250 g
- Men's vest – size L (area 30.5 dm2) corresponds to approx. 1,730 g
- V50 acc. to Kneubühl 3.3 penetrations per 1 billion shots
- Color of outer lining (black, white, bamboo)

TACTICAL PROTECTIVE VESTS

Today, protective vests must generally be worn throughout the entire period of duty. For this reason, protective vests should be quick and easy to reequip, in order to meet the requirements for various situations. Based on the ballistic packages for our undergarment protective vests, we also offer a range of protective over-jackets for this purpose which can be worn open.

We offer various basic formats for these, which can be individually customised in terms of shape, equipment and colour, in order to match the jackets optimally to your requirements. The protective jacket forms are intended to clearly identify officers as well as provide an attractive and fashionable look.

BALLISTIC PROTECTION EQUIPMENT

PROTECTION CLASS 1 + PROTECTIVE OVER-JACKET INCLUDING REMOVABLE ABDOMEN AND COLLAR PROTECTION.

SK I protective over-jacket of German POLICE force pursuant to TR 03/08 protective vests and revision in Sept. 2009. The shell of the vest is equipped with a Molle band for the fitting of differing attachment pockets and holsters.

The ballistic collar is sewn onto the vest and can be folded downwards at the front. The ballistic groin guard is connected with the vest via a zipper and can also be attached in the chest area of the vest if necessary. The body side of the vest casing is made out of a spacer fabric to be able to guarantee the best possible circulation of the body heat. This can be improved upon even more by wearing the corresponding functional underwear. The ergonomic design of this vest enables the maximum freedom of movement with the greatest possible level of protection.

Art. No. 0210869

PROTECTIVE VESTS ACCORDING TO PROTECTION CLASS 4

Our over-jackets in accordance with SK4 are always individual solutions, which are individually tailored to the requirements of our customers.

Additional side-plates, fastening systems for pocket sets, rapid release systems, abdomen protection and collars as well as impact and stab protection are just some of the options which can be additionally equipped to our basic vests / jackets. Materials and colours can also be individually determined by our customers. However, the true special feature of our SK4 vests is the excellent ballistic performance in relation to the protected area and weight.

In size L with a protected area of 0.73 m², our top model weighs less than 10 kg.

Art. No.: 0210235

PROTECTIVE AREAS:

- Complete pullover protective vest 0.49 square metres
- Neck protection 0.03 square metres
- Lower body (groin) protection 0.06 square metres
- Insertion panel 0.15 square metres
- Total protection area 0.73 square metres

BALLISTIC PERFORMANCES (complete vest):

- 7.62 x 54R (B32) 6 hits 845 m/s
- V50 STANAG 2920 1.1g, > 600 m/s
- 9 x 19 mm 436 m/s
- 7.62 x 25 mm (TT) 450 m/s
- Stab protection PSDB/P1 + PSDB/S1

WEIGHT:

- Pullover protective vest with abdomen protection, weight without ceramics, approx. 4.80 kg
- Pullover protective vest with neck and abdomen protection, weight without ceramics, approx. 5.20 kg
- Pullover protective vest with neck and abdomen protection, weight with ceramics, approx. 11.50 kg

Art. No. 03301021

PROTECTIVE VESTS ACCORDING TO PROTECTION CLASS 4

A shot-retardant vest of class IV has been developed in collaboration with reporters who often spend time in crisis areas. In doing so, it was established that the requirements are, in part, considerably different to those of the police and military.

The result is a vest with an extremely low weight of just approx. 8.5 kg (in size L). The vest is comprised of extremely lightweight, breathable, permanently flame retardant and highly durable materials. The colours can be freely selected. The highly flexible, extremely lightweight softballistic elements offer superb trauma values. The hard-ballistic plates made of boron carbide offer a weight reduction of over 30% when compared to conventional ceramic plates.

The vest can be adapted to provide an optimal fit and it can also be individually equipped. We would like to especially point out our medical emergency equipment in relation to this.

Shot reports and additional technical data available on request.

AMOK - concepts

Specialised equipment

The threat of persons running amok has increased continuously in previous years.

BONOWI® developed various concepts for coping with these situations, in order to give police officers and special tactical units a set of technically mature and practical tools for use in the field.

BONOWI® introduces these various concepts on the following pages:

- **AMOK CONCEPT I: Protective collars and abdomen protectors**
- **AMOK CONCEPT II: Protective shields**
- **AMOK CONCEPT III: Protective blankets**
- **ADDITIONAL CONCEPT: Emergency medical equipment and accompanying training**

Of course, all of the amok packages can be customized to individual customer requirements.

CONCEPT I

SHOT ARRESTING COLLAR AND ABDOMEN PROTECTION TO UPGRADE EXISTING BULLETPROOF VESTS:

The protective collar is comprised of multiple elastically connected individual sections, designed to ensure that the protected zones remain covered when the arms are moved (e.g. into shooting position). It can be put on and locked in place in a matter of seconds. Customized equipment includes, among other things, loops for a microphone and various Velcro® surfaces for lettering and insignia.

The abdomen protection can be fastened to correspondingly equipped protective vests with Velcro® fastenings. Elastic tapes with metal clips at the ends are attached to the left and right sides of the abdomen protectors, enabling stable and rapid fastening to the belt. These long tapes can be pulled tight once they have been put on, so that it is easy to securely fit the abdomen protector even if the belt is heavily loaded. The structure of the ballistic packages comprised of collar and abdomen protection corresponds to our certified protective vests. Therefore, they fulfill the latest directives for protective vests of protection class 1 incl. 7,62 Tokarev, 9x18 Makarov and 3,57 Magnum.

Art. No 03301005

The **amok bag** was especially designed for this concept and contains the components detailed here.
Art. No. 0630001

The **rescue strap** is easy to handle and enables the removal of a person from a dangerous area with reduced effort.
Art. No. 1030001

ADDITIONAL CONCEPT: MEDICAL EMERGENCY EQUIPMENT FOR EXTREME POLICING SITUATIONS

Especially in amok-situations, police officers can be confronted with personal injuries, which require immediate life-saving measures. However, professional medical help is, in most cases, not available. This means that police officers need to be able to undertake first aid themselves. This relates to gunshot injuries, stabbing and burns, injuries which require special equipment and knowledge and in some cases differ considerably from general “first aid procedures at accident sites”.

BONOWI® offers medical emergency equipment for these special situations, also as supplementary equipment for our amok equipment, as well as the associated professional training. The equipment has been developed in cooperation with a competent partner with international experience in police and military operations and is based on the latest medical and tactical knowledge. This equipment and training gives police the option of providing themselves and others with assistance in the event of life threatening injuries.

The **MINI TRAUMA KIT** – also known as the AMOK Kit – was developed by us to take everyday requirements into account and to close the gap of being able to treat penetrating injuries (gunshot, stab and shrapnel wounds) using the personal equipment. The goal was the development of a Trauma Kit, the packaged size of which is so small that it is unobtrusive during daily service or the working day but still contains enough to ensure you are equipped properly for the worst case scenario. The individual components can be intuitively used by the untrained layperson. A guide is enclosed with every kit and provides the aid worker with instructions on the correct treatment.

Contents:

- 1x OLAES 4” flat
- 1x SOFT tourniquet (NATO tourniquet also available on request)
- 1x breathing shield
- 1x pair of gloves
- 1x casualty triage tag and treatment guide

The MTK is suitable for:

- Soldiers
- Police officers
- Security workers
- Prison officers
- Hunters
- Sports marksmen
- and others...

Art. No. 1510491

A stand has been integrated into the central section in order to allow the shield to be securely placed down, meaning that the upper body can be rested on the thigh without the risk of slipping. In addition, police officers can also use the stand as a handle in order to hold the shield above the head to protect from missiles coming from above.

A plug-in system enables numerous shields to be easily fixed together, even on uneven surfaces, so that a continuous ballistic protection is afforded. This enables, e.g. evacuation of persons from behind a “protective wall” made of shields.

This metal plug-in system in combination with the rammed edges means that the shield can be used as a ram within certain constraints. An integrated “illumination system” with ultra-bright LED lamps on the front can dazzle assailants so that their ability to see the police officers is significantly restricted. The police lettering on the front face of the shield ensures that officers are recognizable at all times. A transport bag ensures that the shield is largely protected from damage while being transported in vehicles.

BONOWI® also offers a folding version of the shield for particularly tight transport conditions, e.g. notback cars. The stability and protective area are fully maintained in this version.

Art. No.: 03301012

CONCEPT II

THE PROTECTIVE SHIELD:

The “**BONOWI® ballistic protective shield SK1 Aramide**” is a protection system which has been especially developed for use by police officers in amok situations. In addition to its operational purpose, a great deal of effort was expended on ensuring light weight, comfortable carrying options by untrained persons and the possibility to easily transport it in a vehicle during the design process.

Despite its comprehensive equipment, the overall weight including all of the attachments could be kept down to approx. 11 kg with overall external dimensions of 1050x550 mm.

The aramide base plate has a large integrated 400x100 mm window. Furthermore, the system has a rotary handle, meaning that the shield can be worn on either the right or left arm. It can be easily engaged in various angles in order to relieve individual muscle groups.

Art. No.: 03301011

CONCEPT III

FLEXIBLE BALLISTIC PROTECTIVE BLANKET ACCORDING TO SK1 WITH EXTENSIVE SCOPE OF APPLICATION OPTIONS:

This product is a shot-retardant structure in the form of a blanket, which can be folded or rolled up.

The back side of the blanket has an integrated inflatable chamber system, which can be inflated by means of previously installed pressure cartridges. This inflatable chamber system causes the shot retardant blanket to be stiffened, similarly to an inflatable mattress. The blanket can also self-inflate by means of triggering the pressure cartridges or other means of inflation. A rapid drain valve enables the air to be released again, in order to reverse the stiffening process. The pressure cartridges are exchangeable. Disposable or refillable cartridges can be used. In addition to stiffening the blanket, the inflatable system also provides protection against trauma in the event of shooting.

The ballistic package is certified in accordance with German shot class 1 (on request also in accordance with US-Protection Level NIJ-III A). With a possible size of 180 x 80 cm, it weighs just approx. 8 kg, which means it can be carried as a full-body protective shield. The protective blanket can be overlapped and connected with additional blankets, both laterally as well as in the longitudinal direction. Each protective blanket is supplied with suckers. This means that they can be safely attached to smooth surfaces, e.g. vehicles or doors. Surrounding straps enable secure carrying (also several connected blankets) and it can also be used as a temporary rescue and recovery stretcher. The ballistic insert is watertight sealed and the external shell can be removed. The robust, tear resistant external cover is machine-washable. Reflective police signs can be attached to the attack side. The protective blanket can be rolled up and transported practically in a special carrying bag. A hook system which can be attached to the blanket enables it to be hung up, for example in rooms or car doors and other positions.

- The blanket can be supplied with optional expanded air chambers for use as a swimming aid or rescue life raft.
- It can be fitted with various illumination systems, e.g. signal lamps or floodlights.
- Optional adapter systems enable items to be fastened to it, e.g.: radios, medical packs, etc.
- Patent pending. Patent No. 102010035713.8

Art. No.: 03301001

TRAINING EQUIPMENT

TRAINING EQUIPMENT

Realistic training is becoming increasingly important in the training of police officers. Scenarios should be undertaken as realistically as possible, with equipment that is true to the original. Our in-house developed training equipment is precisely customized and conceived to meet these requirements. In doing so, quality and durability are given special emphasis.

X-TREM REAL TRAINING PAD

This new impact protection training pad has been especially designed for EKA training, slightly rounded in a new sandwich design with integrated PC panel for highest level of shock absorption and energy distribution. The rounded shape provides good protection, especially from impact in peripheral areas. Horizontally and vertically arranged grips make the pad variable for all training situations. The replaceable front can be quickly and easily replaced and is delivered as a replacement accessory. This makes the X-TREM REAL impact protection pad extremely sturdy and economical.

TRAINING SUIT „SV ARMOUR GUARD“

This high-quality training suit made of Cordura® was developed together with SV specialists. We use Suprotec foam for impact protection and 2 mm PE (Polyethylene) for extreme shock absorption, thereby achieving exceptional damping with a maximum of free movement. Extra long and highly tensile Velcro strips allow the size to be adjusted variably. Fine setting of size is made by the connection strings of the single parts. Head protection can be adjusted at the top and back of the head. The field of vision is protected by break-proof Plexiglas.

The training suit is comprised of the following single parts:

- head protector
- chest protector
- groin guard
- upper and lower arm protector
- thigh and shin guard

Colour: black, standard size, incl. large carrier bag

Art. No. 1800110

TRAINING BODY BOB

The special shape of the body results in a natural, realistic feel of impact. Pedestal can be filled with sand or water and is therefore especially suited for mobile use. The dummy is height-adjustable (max. height 180 cm), is washable and therefore particularly hygienic, and has been designed for use in your SV training centre.

Art. No. 1800901

TRAINING EQUIPMENT

BONOWI STICK TRAINING GLOVE A&F

Realistic deployment training can either be made with the real equipment or with the special training equipment which provides optimum protection while at the same time allowing enough movement and comfort.

The BONOWI A&F training glove has been especially developed for stick training. A slip resistant and ergonomically shaped inner hand provides secure grip and a leather outer shell with exposed protective padding made of Suprotec foam for optimum protection round off the design. The flexible Velcro lock on the wrist provides extra-secure seating.

COLOUR-CODED HELMET 3rd Generation

The Bonowi® colour-coded helmet provides full head-protection to the user. The plastic top with lots of vent openings guarantees good venting. The helmet is equipped with an innovative Spectra 290° thermal lens system that, due to its huge field of vision, always provides the user with a good overview of the scenario. Additional features are the integrated soft-ear protection, the visor and the decreased target area; friend/foe identification is also available.

OVERVIEW OF ADVANTAGES OF THE BONOWI COLOR-CODED HELMET

- 290 degree field of vision
- non-fogging visor
- light and totally flexible
- highest level of wearing comfort
- very good communication

We deliver the helmet with adjustable neck protection, inside pads, as well as an outer liner. This blocks penetration by paint. The helmet has also been tested under machine-gun fire. There is a firing protocol for the glasses from the firing test centre at Mellrichstadt, Germany.

Art. No. 1800300

COLOR-CODED AND TACTICAL TRAINING VEST

This light pullover vest has been specially developed to be worn with a ballistic protection vest and our color-coded helmet.

MODEL DESCRIPTION

- nylon/cotton/mesh, belt webbing, elastic, Velcro/fleece, breathable
- protective effect in the area of the arms and shoulders against paint munitions and physical attacks
- mesh in the area of the protective vest
- front section: Front opening with zipper, 4 bellow pockets with pocket flap
- back section: Knit lop for Velcro loops, pocket attached over whole width of back
- arms: Set-in sleeve with specially produced protection for paint bombardment
- size can be adjusted at sides as well as arm width
- one-size-fits-all
- additional models are available and can also be designed individually

Art. No. 1800400

COLOR-CODED VEST

Extremely light and flexible training vest for colour-coded shooting and bombardment training, made from highly durable and washable nylon fabric. The overlapping area in the front makes the jacket easy to take on and off and covers almost all sizes (universal size). Shoulder, upper arm and groin protection are integrated in the vest, neck protection is worn separately. Inside the vest a high performance shock absorber is used which considerably reduces the velocity of the colour-coded bombardment.

Colour: black

Art. No. 1510704

BONOWI® TRAINING & CONSULTING

Since it was established BONOWI® has not only been focusing on the development and production of especially innovative products. Not least due to the earlier work of the founder of our company as a police trainer, BONOWI® attaches considerable value to being able to offer our customers highly qualified and professional training for the products that they buy from us, which has attracted considerable interest both in Germany and abroad. With Florian Lahner as its Director, as one of the biggest training institutes in Europe the LAHNER ACADEMY offers a wide range of education and training for the target groups of police authorities/military, providers of security services and people/businesses. The LAHNER ACADEMY is the platform for training in the fields of tactical operations and security. It attaches considerable value to the development and conveying of highly innovative and modern concepts. The trainers at the academy do not stick with old-fashioned methods, but are known for their innovative and unconventional approaches. For BONOWI® the LAHNER ACADEMY provides instruction on the use of their products and offers tactical training and security training. The innovative concept behind the use of the BONOWI® EKA baton is a leader in the training market and is also used in authorities and units abroad. In this context the unique possibilities of the EKA are used to resolve critical policing situations safely and effectively. Our medical products are specially developed to deal with life threatening injuries caused by gunshot wounds or stab wounds. Training is also available for the use of these products, since another key aspect of security that cannot be underestimated is doing the right thing in serious situations. Our range of medical training courses cover several additional operational situations that are not only confined to policing and military work but are also used by businesses for the staff training purposes.

Approved

The LAHNER ACADEMY awards a highly regarded seal of quality which is only awarded to especially innovative products. These products are also used exclusively in our training courses and are recommended without qualification. For BONOWI® the EKA, the TRILOCK and the TRILOCK Flex have all received this award.

BONOWI® police-

Customers and interested parties can visit the 300 m² Bonowi IPE GmbH showroom from 09:00 to 18:00 hours on weekdays and 10:00 to 14:00 hours on Saturdays to obtain information about the Bonowi product range from our professional shop team. Of course, all of the articles and items of clothing can be tested and tried for size. You are sure to receive the best quality and advice possible at attractive prices here, covering everything from functional service jackets, functional undergarments, gloves, boots, hats, comfortable outdoor and leisure clothing as well as a comprehensive range of accessories e.g. belts, holsters, batons, LED torches and much more. INFORMATION

BONOWI® provides this brochure exclusively to public authorities, the military, police and authorized security services.

Only the items on pages 18 – 19 lamps, page 24 FireEx extinguishing gel, pages 28 – 33 gloves, pages 34 - 35 service bags, page 36 glasses, 37 knives and 64 – 69 training equipment, are also available to the public.

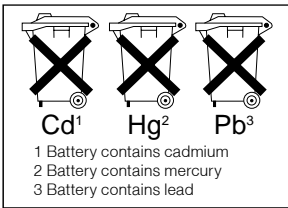

Important information about the disposal of batteries and rechargeable batteries:

Consumers are obliged to observe the German battery laws relating to the return of all used cells and rechargeable batteries. It is prohibited to dispose of batteries with household waste. A number of the products offered are also available to the public and are supplied with batteries/rechargeable batteries included. In relation to § 18 of the German battery law (BattG), we are obliged as dealer to make you aware of the following information regarding the sale of batteries/rechargeable batteries:

Please hand in your old batteries/rechargeable batteries at community collection points or at participating local stores. It is prohibited to dispose of batteries with household waste and doing so is against the law. Returning batteries is free of charge to you. You are also welcome to return used batteries/rechargeable batteries that were purchased from us free of charge. Please be aware that the return only relates to the actual batteries/rechargeable batteries themselves, not devices with integrated batteries/rechargeable batteries. If you intend to send batteries/rechargeable batteries back to us, please ensure that the package is sufficiently stamped to cover the cost of postage. Please send your package to the following address:

Bonowi International Police-Equipment® GmbH
Dekan-Laist-Straße 32
55129 Mainz / Germany

Batteries containing hazardous substances are designated by the symbol of crossed out rubbish container, similar to the symbol illustrated here:

The chemical designation of the hazardous substance is found underneath the rubbish container symbol.

Additional detailed information regarding the battery directive can be obtained from the German ministry for the environment, nature conservation and reactor safety (www.bmu.de/abfallwirtschaft).
